Crowd-sourced Naloxone with NaloxoFind

Training

AltrixMedical
Be a hero. Save a life.

Background

- NaloxoFind is a free app for Apple and Android smartphones.

- The app enables anyone around an overdose victim to send anonymous requests to nearby naloxone carriers.

- When a request is made, all registered naloxone carriers nearby are notified and the requestor is prompted to dial 911.

- If a registered naloxone carrier accepts an alert request, the app automatically guides them to the patient, enabling timely administration naloxone.

- NaloxoFind also shows registered public naloxone locations (e.g., wall mounted naloxone) within a two mile radius.

- Purpose of NaloxoFind is to augment – not replace - the 911 EMS system.

Installation

NaloxoFind is available on the Apple App Store and on Google Play – search for "NaloxoFind" or point your smartphone camera at the barcode below.

Point your smartphone's camera at the above picture to install NaloxoFind.

NaloxoFind User Types

- **Anonymous bystanders** are users who have downloaded the app but have not registered as naloxone carriers.

- **Registered naloxone carriers** have registered with the app and will be alerted if a nearby user requests help.
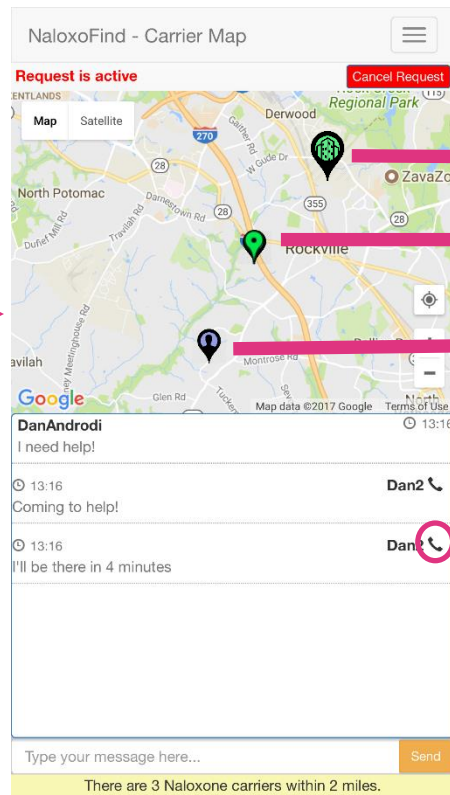

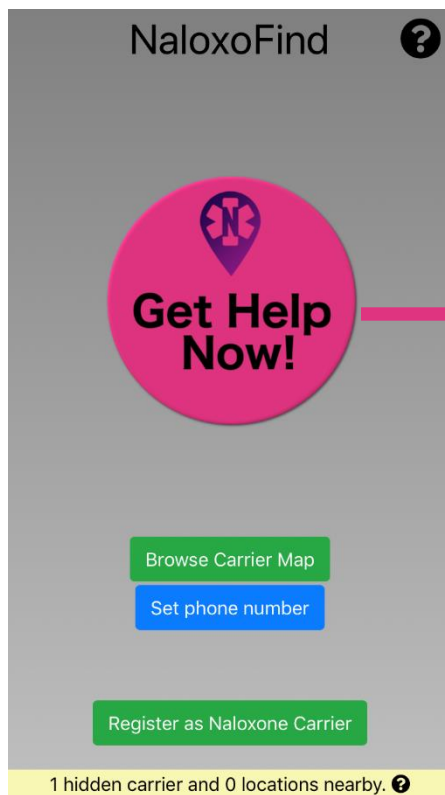

Bystander Usage

- Browse registered locations; registered carriers are hidden until a request is accepted.

- Set phone number that will be displayed to responders when Get Help button is pressed.
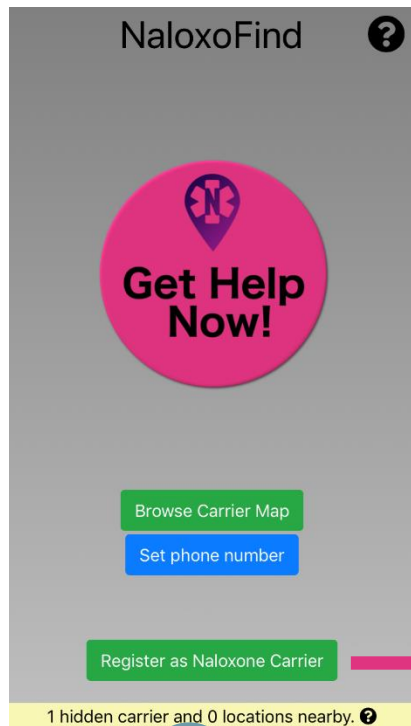

Bystander Usage – Get Help

Cancel request.

Naloxone Carrier – Registration (Cont'd.)

NaloxoFind - Location Mode

Constant tracking mode will monitor your location in the background all the time (even when not using the app). In this mode you will get alerts whenever someone within 2 miles of your device requests help. However, no one will see your location unless you agree to help them.

Fixed location mode will not track you. Instead, you will set a fixed location within the app. If anyone requests help near your fixed location you will be alerted. You can set how far away from your fixed location you want to get alerts (2 miles, 5 miles or 10 miles). No one will see your location unless you agree to help them.

You can change your setting at any time using the settings menu.

Constant tracking   Fixed location

Drag map, pin or   Alert radius:

Find Address   5 miles

Save Location Setting

- Fixed location: Drop a pin at a specific location to be alerted if help is requested within a radius you specify.

- Click "Find Address" and select an alert radius to drop the pin at a certain place (e.g., "Liberty Island").

- Drag the screen or pin to position by hand.

- Save Location Setting.

- No location will ever be sent from the device unless you accept a request for help.

Constant tracking (recommended): NaloxoFind monitors your location and alerts you if someone within a two mile radius requests help. No one can see your location or contact you unless you accept a request.
